# Towards Better Understanding of Agile Values in Global Software Development

Dr Pär J Ågerfalk, PhD

University of Limerick, Ireland

UNIVERSITY *of* LIMERICK  
OLLSCOIL LUIMNIGH

# Agenda

- Global Software Development
- Agile Software Development
- Method Rationale
- Rationale and Agile Values in GSD

# Global Software Development

- Distance
  - Geographical
  - Temporal
  - Socio-technical
- Impacts processes of
  - Communication
  - Coordination
  - Control

# Agile Methods

- Lightweight approaches
- “Just enough method”
- Seemingly contradictory to GSD
  - On-site customer
  - Face-to-face communication emphasized
  - Aggressive release schedules
  - ...

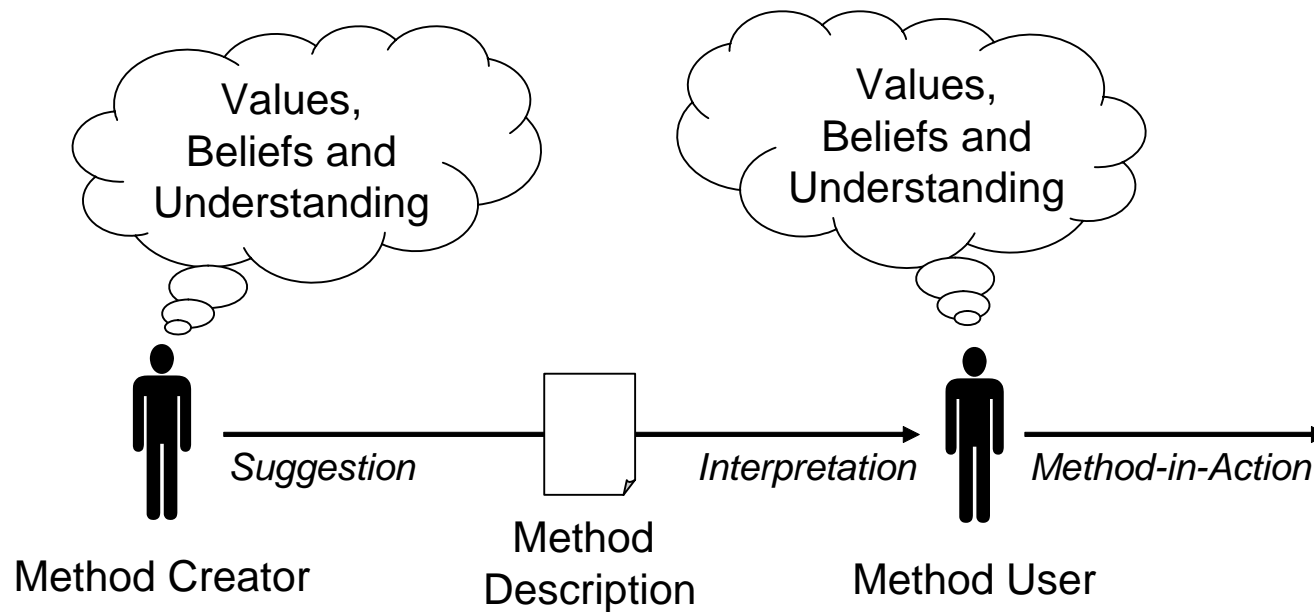

# Method Rationale

- Reasons behind method prescriptions
- Reasons for adaptations of methods
- Important for understanding why a method prescribes something and for being able to rationally choose whether or not to follow a prescription – Rationality Resonance

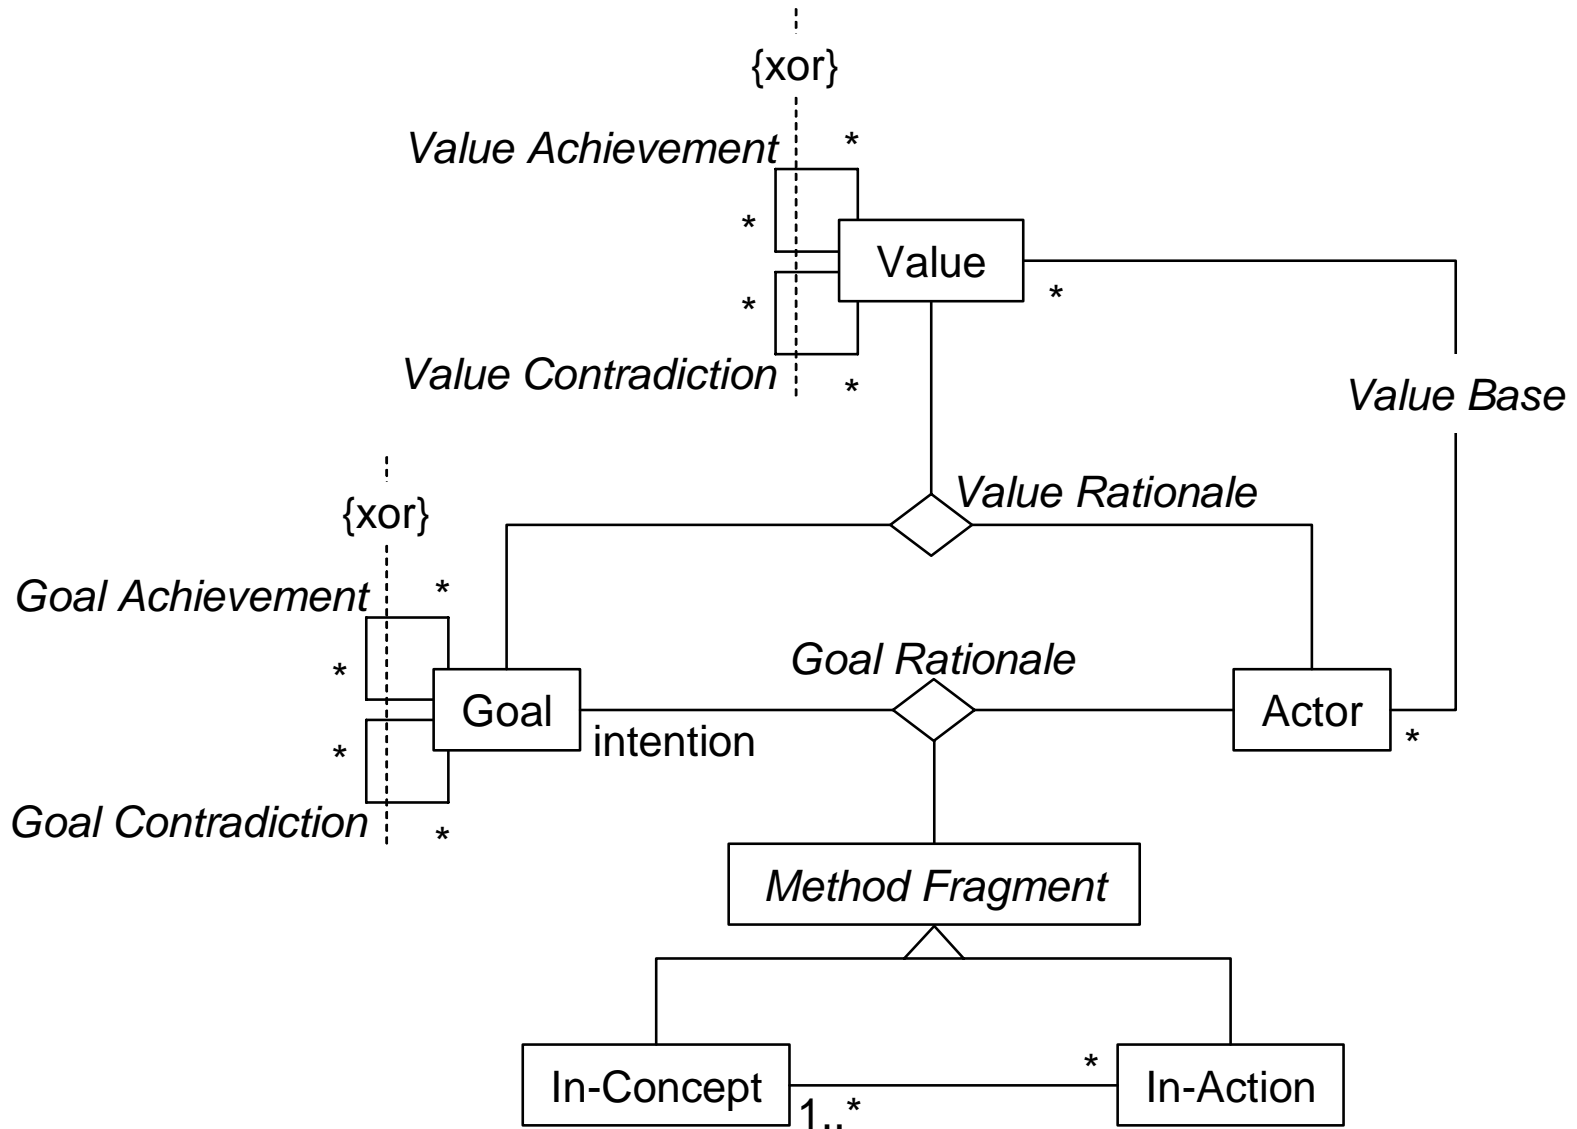

# Methods as Action Knowledge

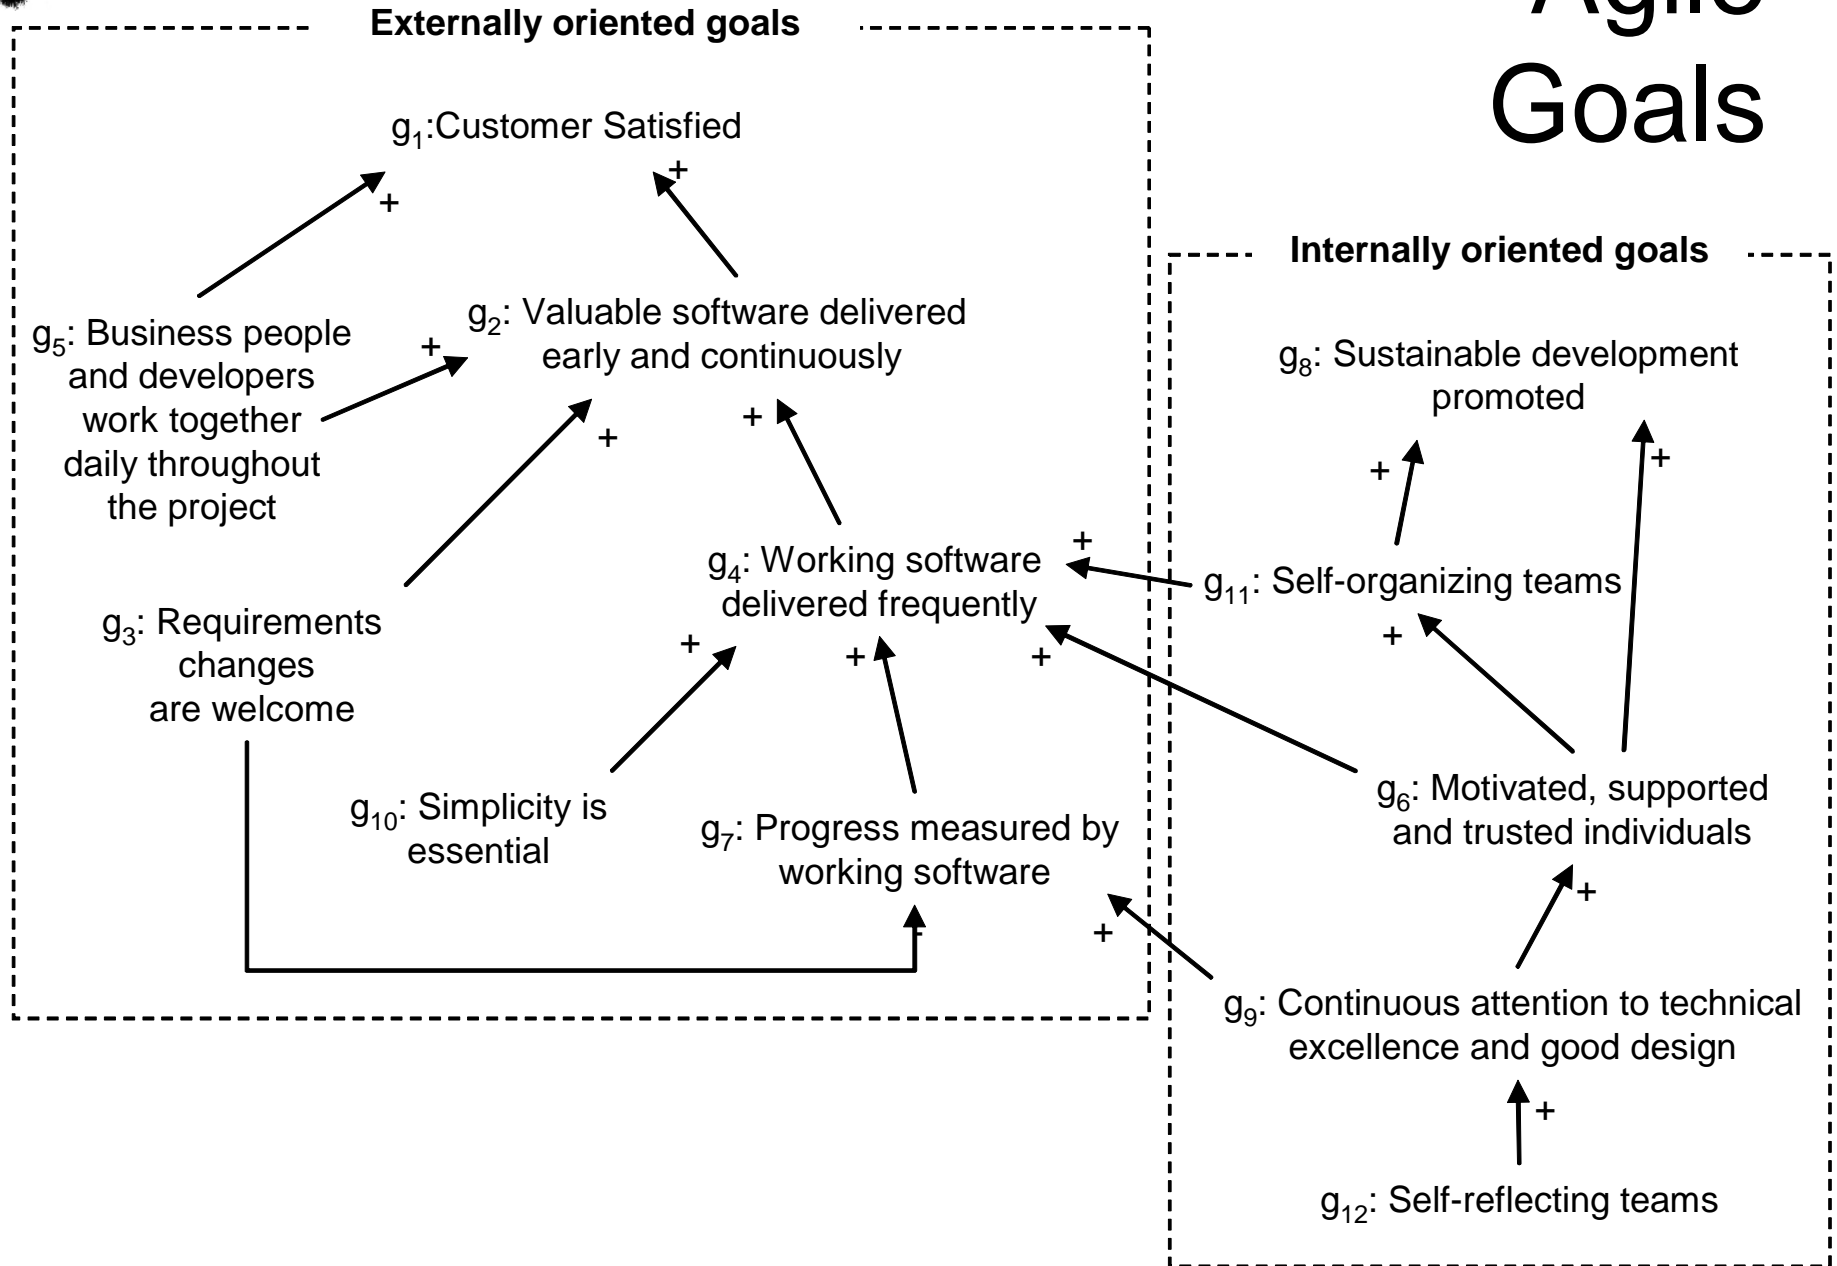

# Goals and Values

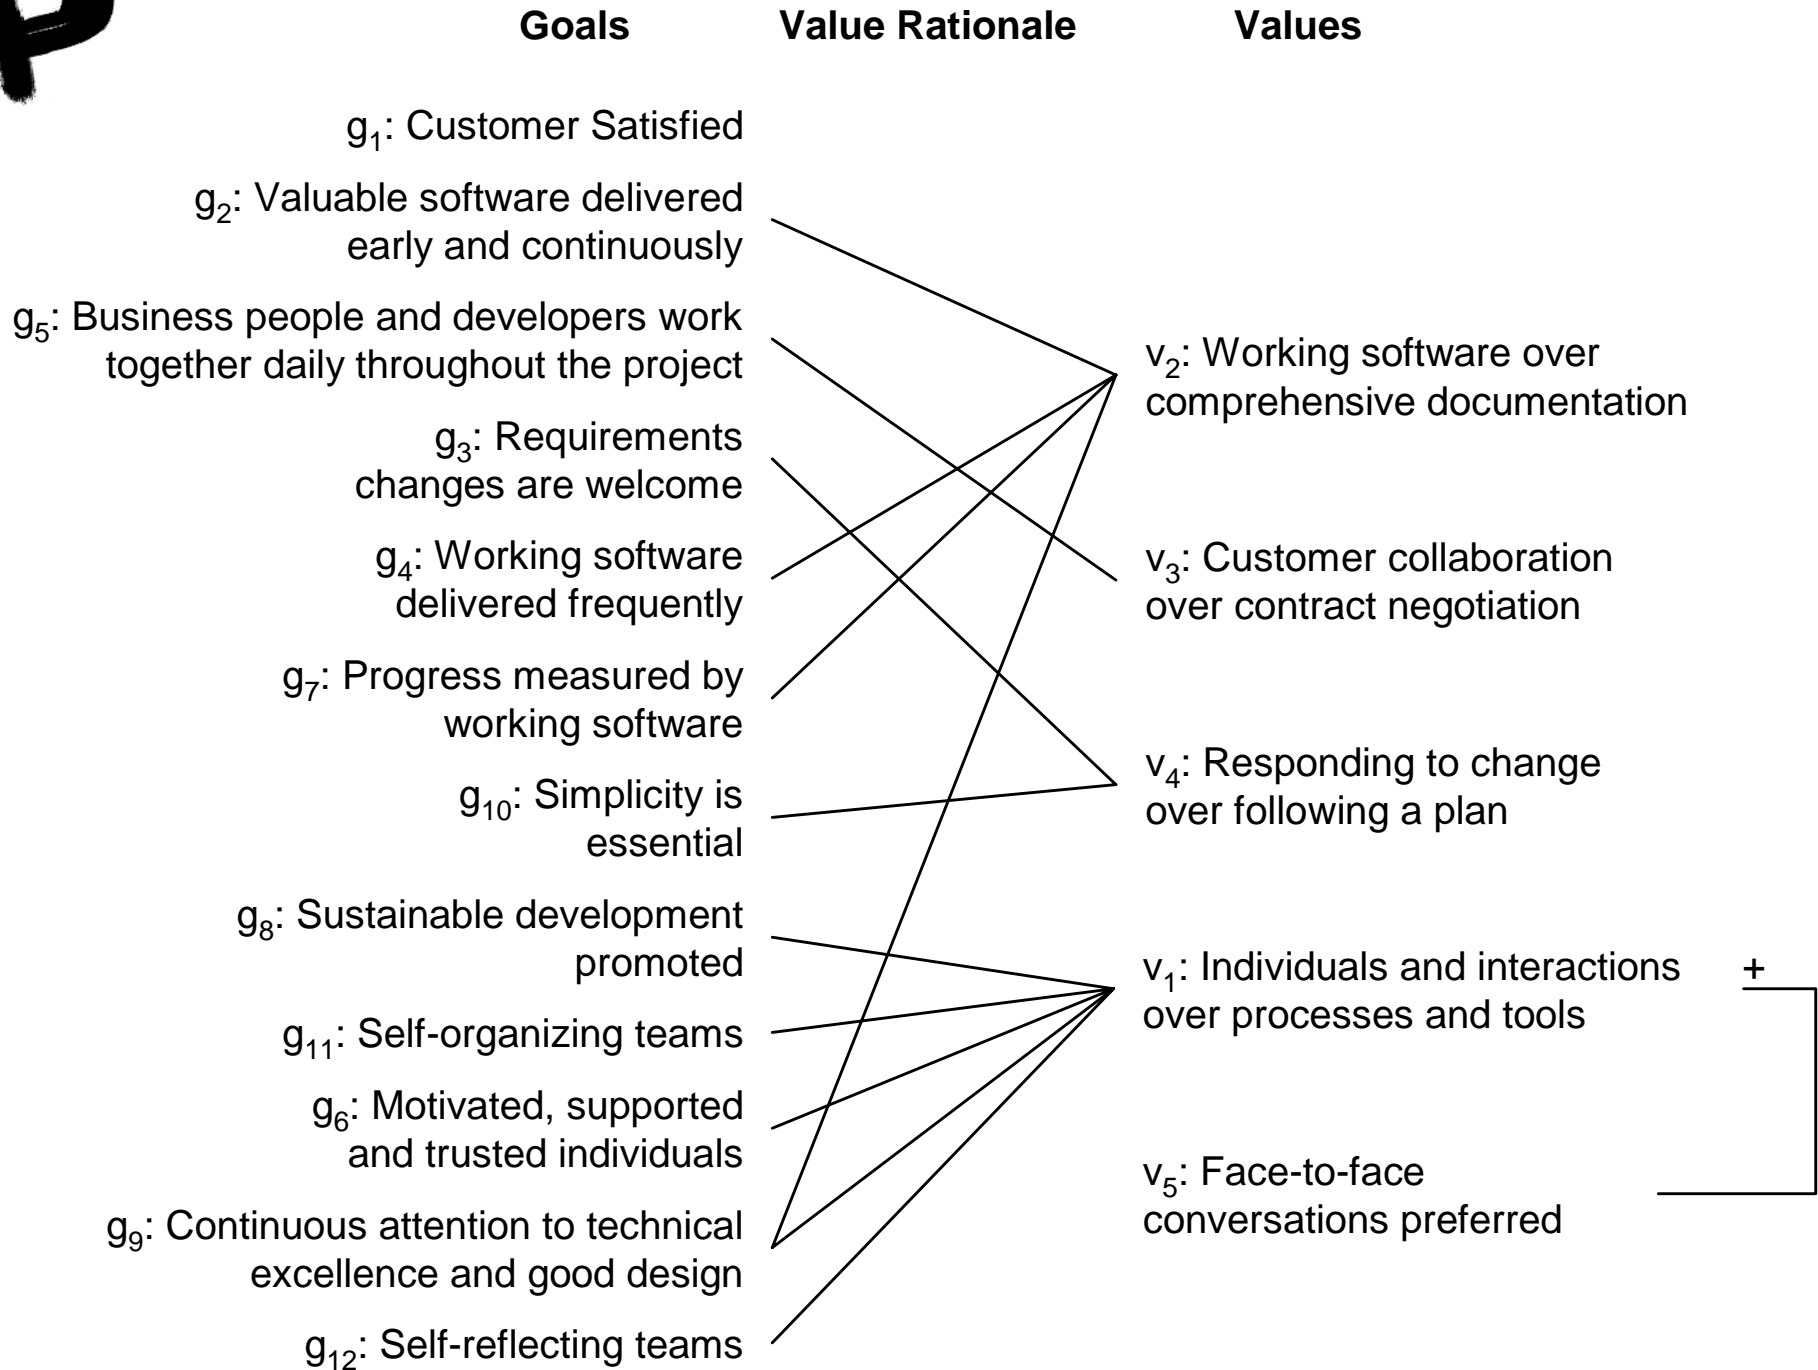

# Agile Goals

### Goals

### Goal Rationale

### XP Fragments

g<sub>5</sub>: Business people and developers work together daily throughout the project

g<sub>3</sub>: Requirements changes are welcome

g<sub>4</sub>: Working software delivered frequently

g<sub>7</sub>: Progress measured by working software

g<sub>10</sub>: Simplicity is essential

g<sub>6</sub>: Motivated, supported and trusted individuals

g<sub>14</sub>: Knowledge sharing facilitated

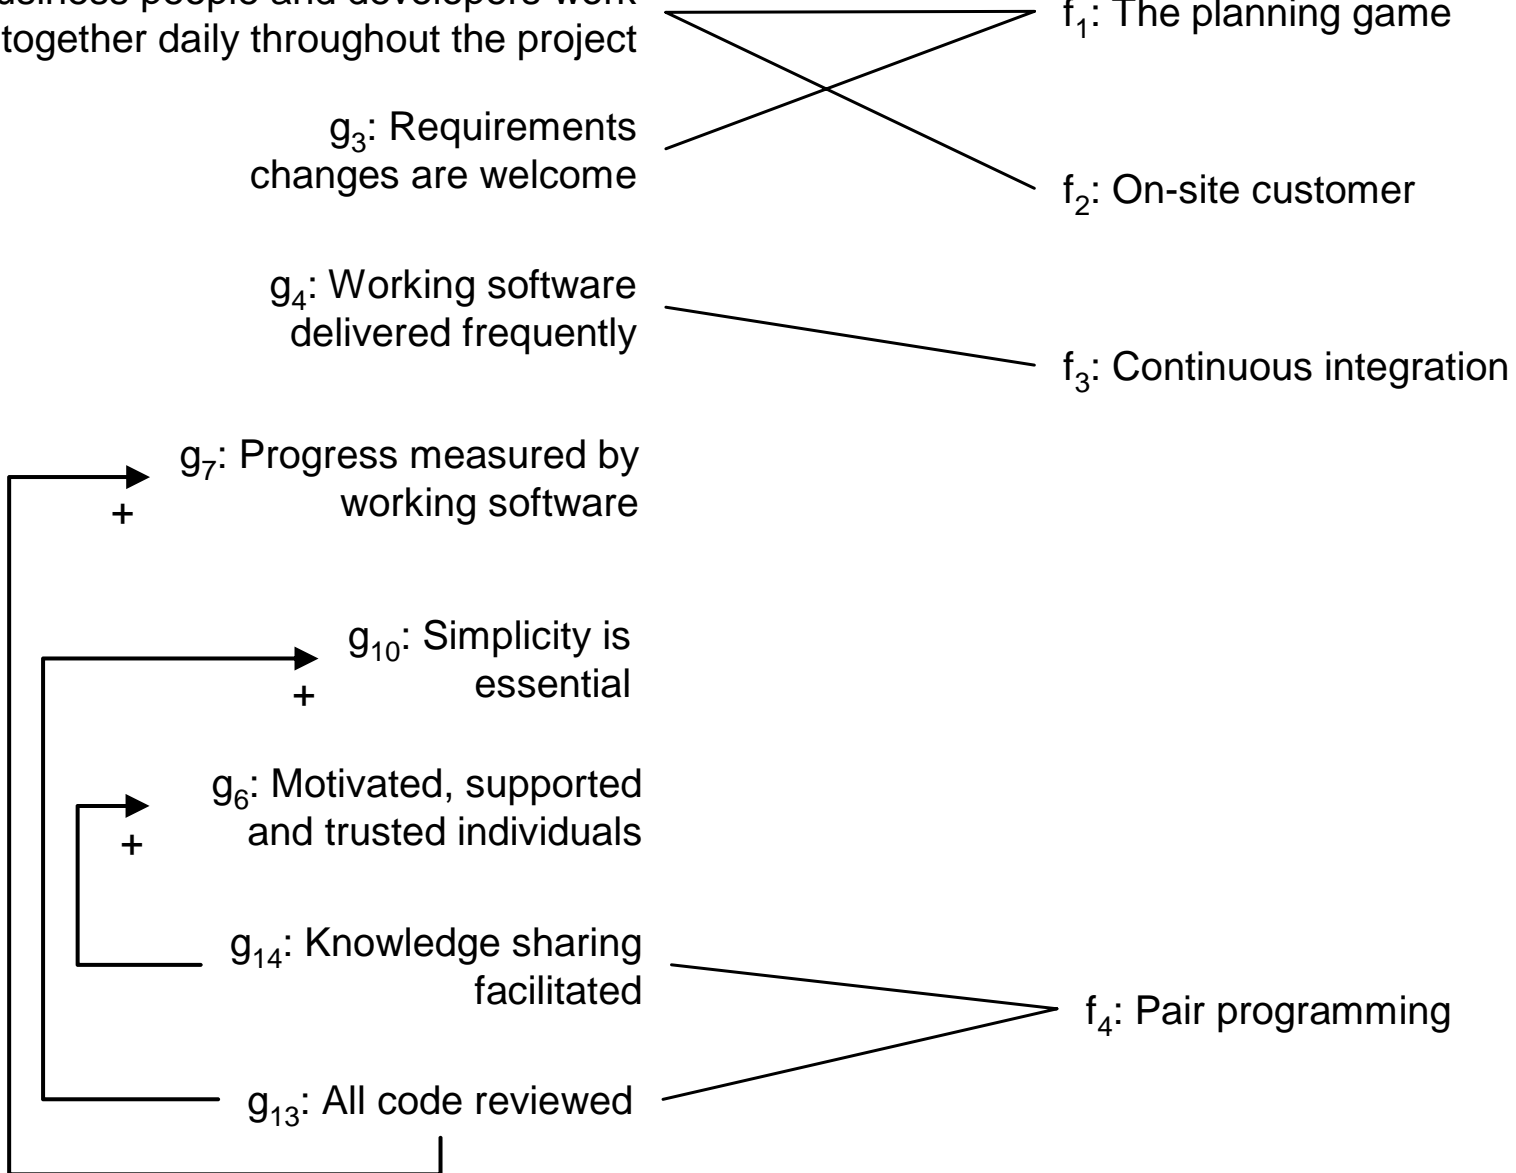

g<sub>13</sub>: All code reviewed

f<sub>1</sub>: The planning game

f<sub>2</sub>: On-site customer

f<sub>3</sub>: Continuous integration

f<sub>4</sub>: Pair programming

# Agile Method Fragments in GSD

- Analysis of the use of agile method fragments in GSD
- GSD Goal: Reduce Distance!
- E.g. Pair Programming
  - Reduces *temporal distance*
  - Increases knowledge sharing, hence reduces *socio-cultural distance*

# Achieving Agile Values

- Finding alternative ways of operationalizing agile values in goals and specific GSD method fragments
  - E.g. “on-site customer” not the only way to get business people and developers to work together, perhaps.
- Tailoring existing agile method fragments to a GSD context
  - E.g. Stand-up meetings to hand over work between sites

# Conclusion

- Understanding the goals of agile methods and the values these reflect is important in order to understand why certain method fragments are suggested
- It could be used to
  - understand why particular agile method fragments apply (or not) in GSD
  - formulate alternative method fragments suitable for GSD that operationalize agile values
